

# How to licence macOS

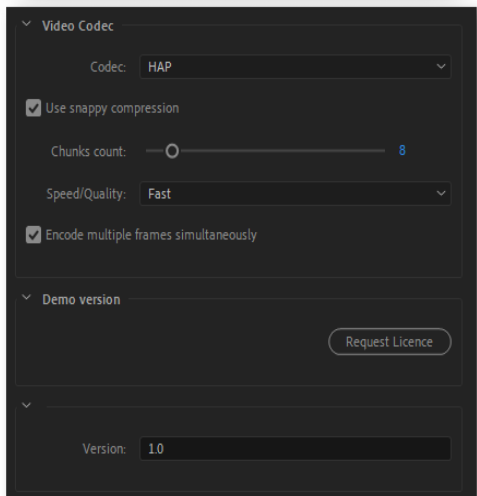

Open DMG, and run the .pkg installer

At the "Install licence" file step, click on "continue".  
The plug-in will be installed as a trial version  
(limited to an output of 250 frames watermarked).

At the end of the installation process, open Media Encoder  
Add a "footage" to the "renderqueue" and select Jokyo Hap Encoder

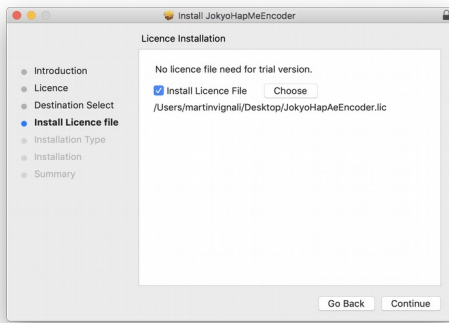

In the Export Settings dialog, click on Request Licence, to generate  
the request file for your computer.

A request file named JokyoHapMeEncoder.ask will be created on your desktop.

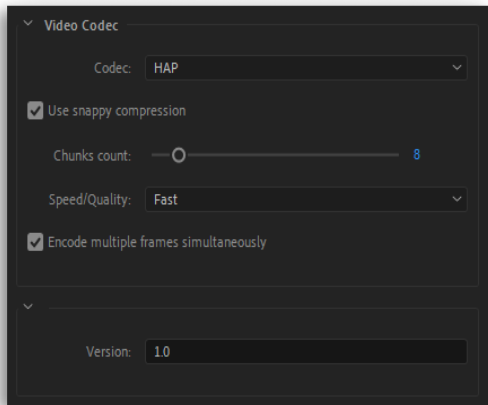

E-mail this file to [licence@jokyoencoder.com](mailto:licence@jokyoencoder.com) with your purchase  
order number.

It can take around 2 working days for the licence to be created.

You will then receive an email containing a file called JokyoHapMeEncoder.lic

Run the .pkg installer again.  
At the "Install Licence file" step, select the file JokyoHapMeEncoder.lic and continue the installation process.

You can check on the Export settings dialog in Media Encoder that there is no more "Demo Version" tab.
