

How to license macOS

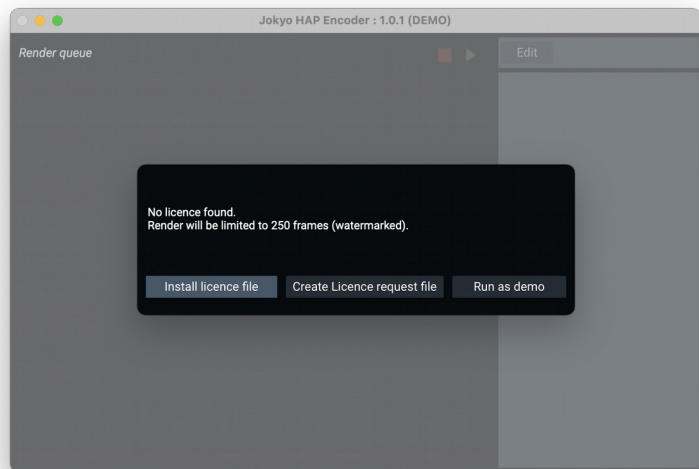

Open JokyoHAPEncoder app on the computer you want to activate.

Click on "Create license request file".

A file named JokyoHAPEncoder.ask will be created on your desktop (it contains some kind of hardware fingerprint need to create the license).

Send this file by email at licence@jokyoencoder.com with your purchase order number
It can take around 2 working days for the license to be created (license generation is a manual process on our side)
You will then receive an email containing a file called JokyoHapEncoder.lic

Reopen the app, and choose "Install licence file".
Select the file JokyoHapEncoder.lic
