

Release Notes

Jokyo HAP Encoder

1.4.4 : (2024/03/16)

- Fix quality parameters not always used during encoding

1.4.3 : (2024/03/04)

- Fix preset list refresh
- WIN : Fix alpha conversion (Premultiply to/from Straight) not always apply

1.4.2 : (2024/02/12)

- Add 7.1 support
- Add Import/Exports of multiple presets
- Crop improvement :
 - Crop can now be preview and more easily edit
 - Add crop by origin and size (previous mode, become Edges Crop)
 - Add Multicrop mode, to create in one pass, several output, with various crop.
 - New file naming options for crop values.
- Add new options to choose target alpha mode (for automatic conversion between straight and premultiply alpha).
- New preferences, to choose default preset to apply when importing files (depending if file have alpha or not, and audio only).
- Add various source interpretation properties to overwrite source file default interpretation (fps, alpha mode, YUV range).
- Write metadata in target file to store alpha mode, and optionnaly crop box information (store origin of crop file and source file resolution)
- Various fix for image sequences :
 - Fix reading some image sequence name
 - Correctly use the default image sequence fps.
 - Fps of image sequence can now be set for each image sequences if need.
- Various bug fixes for Variable frame rate file. And add a preference to limit max fps interpretation for some VFR files.
- Fix AV1 decoding on mac
- Improve supports of H265 and H264 10 bits
- Source file can now be preview in edit (with zoom, background selection, YUV range conversion preview)
- Folder can now be drop in the main UI, to import all supported medias.
- Change alpha detection of Prores 4444 file (to correctly read some invalid prores 4444 mov files).
- Add support for 48 and 50 fps in reinterpret fps mode.
- Various UI update and fix
 - UI : Spinbox (like crop values, size parameters), can now accept math text evaluation. For example you can write "1920*2", instead of "3840"
 - UI : Audio and video edition, have now collapsable parameters group. (Cmd/Ctrl Click to open/close params group)
 - UI : Add Desktop notification (who can be choose in preferences).
 - UI : Add more explicit warning/error for invalid parameters
- Try to create target folder if it doesn't exists, and only fail if it can't be create.
- Add 48 and 50 fps in reinterpret fps mode.
- Fix wrong auto channel assignment for some 5.1 quicktime files
